

IN THE CLAIMS

Please amend the claims as follows:

1. (original) A display device comprising a first light guide, a movable element and selection means for locally bringing the movable element into contact with said light guide, characterized in that the display device comprises a second light guide, wherein said movable element is arranged in between said light guides, and wherein said selection means are arranged to locally bring the movable element into contact with a selected one of said light guides.

2. (original) A display device as claimed in claim 1, wherein said movable element is reflective.

3. (original) A display device as claimed in claim 1, wherein said movable element is transparent.

4. (original) A display device as claimed in claim 1, wherein said selection means comprise row and column electrodes and means for applying voltages to the row and column electrodes.

5. (original) A display device as claimed in claim 1, further comprising light-emitting means for introducing light into said light guides.

6. (original) A display device as claimed in claim 5, wherein said light-emitting means are arranged to emit UV light into the light guides, and wherein the display device comprises elements for emitting visible light when excited by UV radiation.

7. (currently amended) A display device as claimed in claim 5~~or~~ 6, wherein said light-emitting means are arranged to alternately introduce light into said first and second light guides.

8. (original) A display device as claimed in claim 1, wherein said light guides are formed by plates of a transparent material, sandwiching the movable element between them.
